EXAMINER'S REASON FOR ALLOWANCE

Allowable Subject Matter

1. **Claims 1-11** are allowed over prior art.
2. The following is an examiner's statement of reasons for allowance:

Ahn discloses a transmission system comprised of selecting a fine and coarse mode for synchronizing/detecting carrier frequency offset controlled by a controller, which causes a switch to turn at a predetermined time. Ahn does not disclose a controlling signal based on the quality of a channel coefficient filter and frequency error, a mode for processing no frequency error correction and an open-loop coarse frequency correction. IT can be argued that a 103 rejection on these claims. No references could be found for a system that chooses a fine or coarse frequency correction, wherein the loop is closed for a fine frequency, opened for a coarse frequency.

Burger discloses a transmitting system comprised of choosing either a fine regulation signal or a coarse regulating signal based on a timing signal of the mixed signal. Burger does not disclose an open-loop for coarse frequency correction, a mode for processing no frequency correction and controlling the selection based on the frequency error and a quality factor of a channel coefficient filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
